PROFESSIONAL SUMMARY

Software Engineer with **2.5+ years of hands-on experience** in designing, developing, and deploying scalable web applications using C#, ASP.NET Core, SQL Server, and Angular. Strong understanding of object-oriented programming, database architecture, REST API development, authentication mechanisms, and software engineering principles. Skilled at writing clean, optimized, and maintainable code while troubleshooting complex technical issues. Proven ability to work in collaborative Agile environments and deliver production-ready solutions. Committed to continuous learning, adopting new technologies quickly, and delivering high-quality solutions aligned with business requirements.

EXPERIENCE

WEB MINDS IT SOLUTION

Software Engineer

Sept 2023 – Mar 2026

Pune, India

- Designed and developed enterprise-grade web applications using ASP.NET Core MVC architecture and C#.
- Architected RESTful APIs supporting authentication, reporting dashboards, user management, and business logic modules.
- Designed relational databases using SQL Server with proper normalization, indexing, constraints, and optimized schema structure.
- Implemented secure authentication and authorization systems using role-based access control for protected endpoints.
- Developed reusable backend services and modular components following clean architecture and separation of concerns principles.
- Used Entity Framework Core for ORM mapping, migrations, LINQ queries, and database optimization.
- Improved application performance by analyzing execution plans and optimizing database queries and API calls.
- Debugged production-level issues, diagnosed root causes, and implemented reliable fixes to ensure system stability.
- Integrated third-party APIs and external services to automate workflows and support real-time data exchange.
- Collaborated with frontend developers for seamless API integration and consistent data flow across layers.
- Participated in Agile development lifecycle including sprint planning, standups, task estimation, and delivery tracking.
- Conducted peer code reviews and enforced coding standards to maintain high-quality codebase.
- Maintained source code using Git version control and handled merge conflict resolution.
- Prepared technical documentation including API specifications, workflows, and database structures.

PROJECTS

Learning Management System

- Developed scalable backend APIs using ASP.NET Core Web API to manage students, instructors, courses, and enrollments.
- Designed REST endpoints for CRUD operations with validation, structured responses, and exception handling.
- Implemented authentication middleware and role-based authorization (Admin, Student, Instructor).
- Designed relational SQL Server database with keys, constraints, indexing, and optimized queries.
- Applied layered architecture to separate presentation, business logic, and data layers.
- Used Entity Framework Core for ORM operations and migration handling.
- Integrated Angular frontend with backend APIs for real-time communication.
- Ensured data integrity using validation rules and transaction handling.

Hospital Management System

- Developed full-stack web application to manage hospital workflows including patients, doctors, and appointments.
- Built backend using Node.js and Express.js to manage routing, middleware, and APIs.
- Implemented authentication, authorization, and admin control modules.
- Designed MySQL database schema with relationships for structured medical data.
- Developed admin dashboard for monitoring system activity and managing records.
- Implemented validation and error handling to ensure stable execution.
- Optimized SQL queries to improve retrieval speed of patient and appointment records.

ATM Simulator System

- Developed desktop banking simulator using Core Java, Swing, and JDBC connectivity.
- Implemented secure PIN authentication and transaction validation logic.
- Built banking modules including withdrawal, deposit, balance inquiry, and transaction history.
- Stored transaction records securely in MySQL database.
- Applied object-oriented principles such as encapsulation and abstraction.
- Designed intuitive GUI for improved usability and interaction.
- Handled runtime exceptions and edge cases for reliable system behavior.

TECHNICAL SKILLS

Languages: C#, Java, SQL, JavaScript

Frameworks: ASP.NET Core, Web API, Angular, Entity Framework Core

Databases: SQL Server, MySQL

Concepts: OOP, REST APIs, MVC Architecture, Authentication, CRUD, Data Structures

Tools: Visual Studio, VS Code, Git, GitHub, Azure (Basics), Docker (Basics)

EDUCATION

Government Polytechnic Ratnagiri

Diploma in Electronics & Telecommunication

2021 – 2023

72%

Pravara Kanya Vidya Mandir

SSC

2020

79%

CORE KNOWLEDGE

- Clustered vs Non-Clustered Indexes
- SQL Data Types and Constraints
- Primary Key and Foreign Key Relationships
- Static Keyword and Constants in C#
- Access Modifiers and Scope Levels
- Boxing and Unboxing
- Web vs Desktop Application Architecture
- Database Design and Normalization
